The company's award winning technology is powering products and providing timely, accurate and reliable infrared intelligence for numerous applications in many industries. They are equipped with best people, technology and resources. They are known for their quality products and on time delivery.

Thermal imagers visualise and measure the thermal heat emitted by objects so they can reveal problems in a vast range of mechanical and electrical systems in a fast, precise and highly effective way.

They identify the sources of excessive friction, defective switchgear, provide crucial information for many applications, including measuring heat loss from buildings and identifying potential blockages in heating systems.

All of this information is accessible without making contact with the subject. And as 'irregular' thermal emissions can indicate inefficiencies, or potential failures, measures can often be taken in time to prevent loss of production, breakdown of equipment or fire hazards.

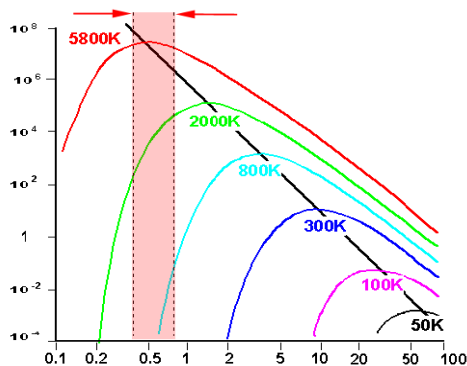

AYT provides online queries for the testing solutions for the customers and increase the life of electrical and mechanical equipments. so, reducing maintenance cost and provides peace of mind.
