Note: WINDOWS is a trademark of MICROSOFT inc.

The instrument contains three separate generators:

- Main generator, that generates either a.c. current, a.c. voltage; d.c. voltage;
- Auxiliary a.c. voltage generator, that generates an independent, phase shiftable a.c. voltage;
- Auxiliary d.c. voltage generator, that generates the d.c. voltage that feeds the relay under test.

All outputs are adjustable and metered at the same time on the large, graphic LCD display.

T/1000 can operate without connection to a PC. With the multi-purpose knob and the LCD display it is possible to enter the MENU mode, that allows to set many functions, that make T/1000 a very powerful testing device, with manual and semi-automatic testing capabilities, and with the possibility to transfer test results to a PC via the RS232 interface. These results can be recorded, displayed and analysed by the powerful X.PRO-3000 software, that operates with all WINDOWS versions, starting from WINDOWS 98 included.
